

The Torrent™ Separator

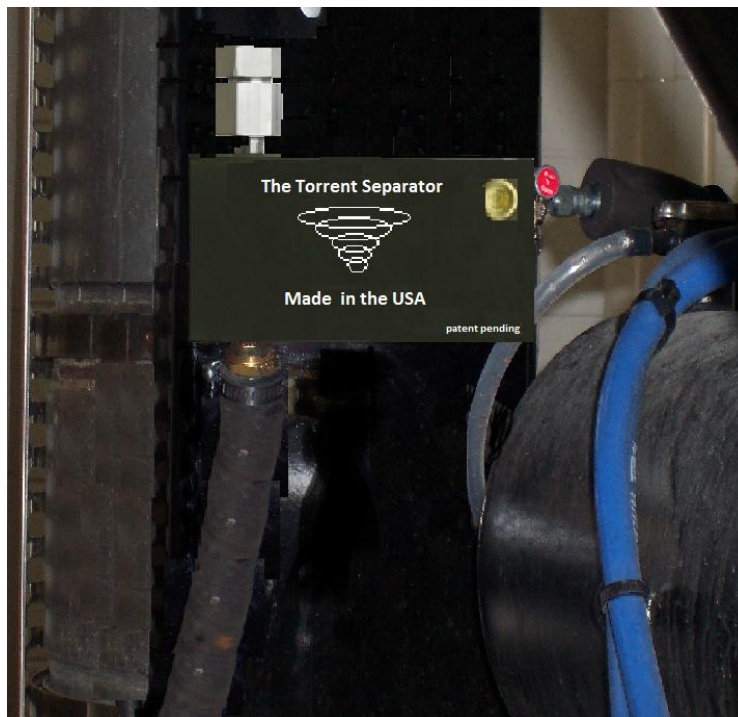

Made in USA

The Torrent™ Separator

What is the Torrent™ Separator?

The Torrent™ Separator is a remote mount Separator that interfaces with your engine's oil system. It removes the water from your oil and unlike our competitors uses no extra energy from the engine. It is small enough to mount in the engine compartment yet powerful enough to clean up to 8 gallons an hour of lubricating oil. There are no filters or replacements parts to purchase. The Torrent™ Separator removes the water that the PCV system misses.

Over the road truckers need to protect their engines from high mileage usage. The cost of oil changes are high and are rising, With the Torrent™ Separator on the engine the quality of the oil will last longer as well the viscosity will stay within the acceptable level longer .

Heavy hauling trucks are under heavy stress and torque. The Torrent™ Separator was designed to protect your engine and oil.

It works in all sizes of engines and conditions.

Reefer units will need to run 7/24 for days/ weeks/ months at a time. By separating the water from the engine oil the friction will be reduced and the oil will last longer, and the maintenance cycle will be less.

Construction equipment stays on the project and is time consuming and inconvenient to change the oil. With the Torrent™ Separator on the engine the oil will last longer saving time and money.

Transit Trains, Buses and School buses need to save money and oil for the environment. You can save oil, reduce the engine wear and prolong the engine maintenance and still save money. The Torrent™ Separator can handle it all.

The Torrent™ Separator is designed for both the personal and the commercial use.
